## ■ TELECENTRIC LENSES

### TCEL Lenses

TCEL model telecentric lenses from **Optotune** and **Opto Engineering** offer a broad magnification range from 0.24 to 3.5 $\times$  and are suitable for the 2/3-in. camera sensor format. Each lens features an Optotune focus-tunable lens embedded into the Opto Engineering lens design to enable focus changes within milliseconds. The design offers a fully integrated solution for industrial vision systems that is ideal for industrial microscopy and industrial inspection customers who require a lens with superior imaging results and expanded depth of field. Eight lenses are available in the product line, which delivers a working distance range of 73.3 to 142.2 mm (2.89 to 5.6 in.).
